HELMSMAN AUCTION

This method of buying lots combines the good features of both the auction system and sale by private treaty. You get the opportunity to bid on and buy any in the offering and you pay competitive market value without any pressure.

THE BENEFITS:

1. You have more time to consider lodging a bid. You can place genuine bids on any lot at any time during the sale period.
2. You have the opportunity to re-assess each lot during the sale period without any pressure to make an instant decision.
3. You have the opportunity to take home the lot you want, irrespective of lot order. For example, having been outbid on lot 36, your first choice, you can move back to your second choice earlier in the catalogue, for example lot 7.
4. If you need more than one lot, Helmsman gives you the flexibility and time to average your purchase costs.

HOW IT WORKS:

1. On arrival, the intending purchasers register at the bid table and receive a buyer number.
2. All lots are displayed for inspection as usual, with relevant information provided in the catalogue.
3. When the sale commences, all lots are on the market simultaneously. You may bid on any lot by filling in a card and handing it to a 'runner'.
4. You may open the bidding at its "upset price" nominated on the day, further bids in multiples of which will be stated on the day will be accepted.
5. Bids are recorded with the buyers number on a large board adjacent to the lot display area. You can bid on any number of lots at once and can see at a glance whether your bid still stands or has been overbid.

6. There is no pressure to commit yourself to another bid. If your first preference goes over your limit you can still bid on another lot.
7. A bid once submitted and recorded cannot be retracted, and the person responsible for submitting such a bid will be responsible for it until it is overbid.
8. The sale will remain open for a minimum of twenty minutes. A bid registered in the last two minutes will result in a two minute time extension.
9. Further bids would trigger the same process until no more bids are received in a specified period, which would signify the end of the sale. (Note that the bidding interval may remain at two minutes throughout or may be shortened progressively to as little as 15 seconds to speed up the sale.)

SALE REBATES:

1. A rebate of 6% will be paid to all agents who attend this sale with or on behalf of their client(s) and settle within 7 days.
2. A rebate of 3% will be paid to all agents who introduce their client(s) in writing prior to the sale, but do not attend this sale, and settle within 7 days.
3. A rebate of 1% will be paid to all agents who settle within 7 days, but do not introduce their client(s) or not attend this sale.
4. A discount of 3% will be given to all buyers who do not settle through an agent, and pay in full on sale day.

Please note: Only ONE of the above FOUR Clauses can be used on any lot.

GTSM

One Line Pre-registration Now available!
Its as easy as One.Two.Three!
Go to www.gtsm.net.au website.
Visa/Bankcard/Eftpos available on sale day.

SALE INFORMATION

CATTLE HEALTH:

- All sale bulls tested negative for pestivirus.
- All sale bulls vaccinated 7 in 1, and Pestigaurd.
- All sale bulls have been semen tested (Mid December 2013) by Collin Kendall from Impact Genetics, and passed to a minimum standard for natural service.
- Adameluca Angus is Beef Only Status for BJD. and should be MN1 approved prior to sale.

INSURANCE:

We recommend you insure your new investment, at least for transit and loss of use for the first joining season. Please see Agents for any insurance requirements.

GUARANTEE:

In the event of a bull proving to be infertile for natural service in the first 6 months from sale date, the vendor will offer to supply a suitable replacement (if available), or credit the purchase price (less any salvage value of the bull) to be used at the next sale. This is provided the problem is not caused by injury or disease since sale day. Any claim must be accompanied by a relevant Veterinary certificate.

INSPECTION:

Bulls are available for inspection at Beef Week Field day, Sunday 2nd February, from 9:00 am – 5:00 pm, or from 10:00 am Sale Day. Inspection can also be arranged by appointment, contact Sam.

SAFETY:

All Sale bulls have been screened for safety and are quiet to handle under normal circumstances. However, sale day places added pressure on them, so use caution and be alert of fighting bulls. Visitors enter cattle pens at their own risk, Children must not enter the yards.

TELEPHONE BIDDING:

If you would like to bid by phone, contact Michael Glasser on 0403 526 702, no later than 8pm Thursday, 20th February.

TRANSPORT :

No transport will take place on Sale Day unless organized prior with Sam. Remember on arrival at your property you should have a few steers or cows in the yards to help your new bull settle in.

Disclaimer: Any persons entering this property for any purpose what so ever including the attendance at cattle auctions do so at their own risk. We are not liable to you for any personal injury or death suffered by you and for the theft, loss or damage to any property caused or contributed to by us or by negligence deliberate act or unlawful conduct. "We" or "us" or "our" refer to the owners their employees contractors or agents and each of them. Whilst all care and attention has been paid to the accuracy in the compilation of this catalogue, neither the vendor nor the agents or representatives thereof assume any responsibility whatsoever for the correctness use or interpretation of the information included in this sale catalogue.

WELCOME TO ADAMELUCA ANGUS

Welcome to the first annual Adameluca Angus bull sale.

Adameluca Angus was established in 2012 with foundation females sourced from Granite Ridge (S.A), Sandy Acres (S.A), Te Mania (Vic), as well as embryos from Schaff Angus Valley (USA).

This year's line up of bulls are the progeny of these females and we are excited by the quality and depth of genetics they have brought to our program. We are confident time will show these females consistently producing sound, strong, quality calves.

In November last year, we welcomed our new Stud Manager, Barry Godbolt together with his wife Joy to the Adameluca team. Barry brings with him a wealth of experience and great knowledge of the cattle industry.

We look forward to meeting you today and throughout the year and would like to thank you for your support and interest in our program.

Kind Regards

Sam Trovattello

Bringing Your New Bull Home

BRINGING YOUR NEW BULL HOME

PURCHASE

DELIVERY

AFTER PURCHASE TIPS

ARRIVAL

MATING NEW YOUNG BULLS

MANAGING OLDER HERD BULLS

DURING MATING

NORTHERN AUSTRALIA

When purchasing a bull, care and handling after the sale can be as important as the purchase itself. Looking after your bull well during the initial stages of his working life may ensure longevity and success within your breeding herd.

Purchase

Temperament is an important characteristic when selecting a bull. Selecting a bull that may be flighty or aggressive will make life difficult for you each time he is handled. Note which bulls continually push to the centre of a mob, run around, or are unreasonably nervous, aggressive or excited.

At the sale, note any changes of temperament by individual bulls. Some bulls that are quiet in the yard or paddock may not like the pressure and noise of the auction and become excited. Others that were excited beforehand get much worse in the sale ring and can really perform. Use the yard or paddock behaviour as a guide, rather than the temperament

shown in the ring.

Delivery

When transporting your new bull insurance against loss in transit, accidental loss of use, or infertility, is sometimes provided by vendors. Where it is not, it is worth considering.

After purchase tips:

- When purchasing, ask which health treatments he has received.
- Treat and handle him quietly at all times - no dogs, no buzzers. Talk to him and give him time and room to make up his mind.
- With more than one bull from different origins, you must be able to separate them on the truck.
- Make sure that the truck floor is covered to prevent bulls from slipping. Sand, sawdust or a floor grid will prevent bulls from being damaged by going down in transit.

Leave the bulls in the yards for the next day or two on feed and water to allow them to settle down with other stock for company. A bull's behaviour will decide how quickly he can be moved out to paddocks.

Mating new young bulls

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows.

Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

When the young bulls are working, inspect them regularly and closely.

Managing older herd bulls

Older working bulls also need special care and attention before mating starts. They should be tested or checked

every year for physical soundness, testicle tone, and serving capacity or ability.

All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition

During mating

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

- If you can arrange it, put a few quiet cows or steers on the truck with the bull. Let them down into a yard with the bulls for a while before loading and after unloading.
- Unload and reload during the trip as little as possible. If necessary, rest with water and feed. Treat bulls kindly—your impatience or nervousness is easily transmitted to an animal unfamiliar to you and unsure of his environment.

If you use a professional carrier:

- Make sure the carrier knows which bulls can be mixed together.
- Discuss with the carrier, resting procedures for long trips, expected delivery time, truck condition and quiet handling.
- Give ear tag and brand numbers to the carrier and make sure you have the carrier's phone number.
- If buying bulls from interstate, organise any necessary health tests before leaving and work out if any other requirements must be met before cattle can come into another State.

When buying bulls from far away, you may often have to fit in with other delivery arrangements to reduce cost. You should make it clear how you want your bulls handled.

Arrival

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows. Never jump them from the back of a truck directly into a paddock—it may be the last time you see them. Bulls from different origins should be put into separate yards with other cattle for company.

Provide hay and water, then leave them alone until the next morning.

The next day, bulls should receive routine health treatments. If they have not been treated before, all bulls should be vaccinated with:

- 5-in-1 vaccine;
- vibriosis vaccine;
- leptospirosis vaccine (if in areas like the Hunter where leptospirosis exists);
- three-day sickness vaccine (if in areas where this sickness can cause problems).

Give particular attention to preventing new bulls bringing vibriosis into a herd. Vibriosis, a sexually transmitted disease, causes infertility and abortions and is most commonly introduced to a clean herd by an infected bull. These bulls show no signs of the illness. Vaccinated bulls are free from vibriosis, so vaccinating bulls against the disease should be a routine practice.

Vaccination involves two injections, 4–6 weeks apart, at the time of introduction, and then a booster shot every year. Complete the vaccinations 4 weeks before joining.

Consult with your veterinarian and draw up a policy for treating bulls on arrival and then annually. Bulls should be drenched to prevent introducing worms and, if necessary, should be treated for lice.

Plan to give follow-up vaccinations 4–6 weeks later.

Northern Australia

Although the Angus breed originated in a cooler climate, they can adapt to subtropical regions with many straight-bred and cross bred producers finding success in Northern Australia. Some of the following information may also be helpful for new bulls located in more temperate climates.

Adaptation

They key to Northern success for Angus is that cattle introduced from the Southern regions of Australia be allowed to adapt to their new environment before commencing their working life. If possible, a break of 3 months is advisable before you set your bull to work.

Purchase in cooler months

Ensure your bulls are in good condition before they do commence their working life. The cooler months are an ideal time to purchase and introduce Angus cattle, allowing them plenty of time to acclimatise.

Change of feed source

When inducting Angus cattle into your herd consider their source of feed. Have you taken an animal which has been supplemented on grain straight to a dry pasture? Animals should be gradually changed over to their new feed to ensure they do not lose condition. This may involve using supplements which could include dry lick/urea blocks.

Managing Cattle Ticks

For ticky areas, bulls should be vaccinated prior to transport and given another booster afterwards. Remember males are more susceptible to ticks than females.
